

CHE 310 – 002 & 003
Lecture Homework #29b

Due: Monday, April 8, 2019, 10:00 am.

1. Provide the major product(s) Clearly indicate the stereochemistry in your structures where appropriate. Where more than one stereoisomer is formed you only need to draw one of the stereoisomeric products. Other stereoisomers should be indicated by writing, “+ *enantiomer*” or “+ *diastereomer*”, as appropriate. Check the boxes on the right to indicate whether the reaction product solution would be optically active ($[\alpha]_D \neq 0$) or not optically active ($[\alpha]_D = 0$). Under the check boxes indicate why that box was chosen (possible answers are: single enantiomer, diastereomers, racemic, meso and achiral)

m-CPBA = meta-chloro peroxybenzoic acid

2. Which reaction(s) above would be classified as an oxidation? A reduction?
